

ST. JAMES INVESTMENT COMPANY

Core Equity Performance Overview - As of August 2020

At St. James we employ an absolute return mindset to long-only value investing, emphasizing proven business models priced at a substantial discount to our conservative estimate of fair value. Importantly, we believe entry price is a key determinant of return.

Portfolio Manager: Robert Mark

Minimum Investment: \$100,000

Value of \$1,000 Invested in June 1999 Through August 2020

* June 1999 inception

St. James Investment Company (St. James) claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS standards. St. James has been independently verified for the periods 06/01/1999 – 06/30/2020. The verification report is available upon request. Verification assesses whether (1) the firm has complied with all the composite construction requirements of the GIPS standards on a firm-wide basis and (2) the firm's policies and procedures are designed to calculate and present performance in compliance with the GIPS standards. Verification does not ensure the accuracy of any specific composite presentation.

Firm and Composite Information St. James is an independent investment management firm that manages equity and balanced portfolios. The firm invests in U.S. and non-U.S. stocks, and cash or cash equivalents. The Core Equity portfolio seeks long-term capital appreciation in the equities of what we believe to be well-financed, well-managed companies priced below their intrinsic values. These accounts primarily invest in US equities and expect to remain fully invested in stock market investments, but as market conditions warrant, SJIC will allocate portions of the accounts into foreign equities and fixed-income, to include domestic, foreign and defensively positioned ETFs to reduce its exposure to market fluctuations. The Core Equity Composite was created in January 2005 and has an inception date of June 1999. A complete list and description of firm composites is available upon request.

Benchmark For benchmark purposes, the Composite is compared to the S&P 500 Index Net Total Return, a market-capitalization weighted index containing the 500 most widely held companies (400 industrial, 20 transportation, 40 utility and 40 financial companies) chosen with respect to market size, liquidity, and industry. The volatility of the S&P 500 Index may be materially different from that of the strategy depicted, and the holdings in the strategy may differ significantly from the securities that comprise the S&P 500 Index. Indices are unmanaged, and investors cannot invest directly in an index. The S&P 500 Index is calculated on a total return basis, with dividends reinvested after the deduction of withholding taxes, and is not assessed a management fee. The comparison of results to an index does not disclose all facts materially relevant to the comparison.

Performance Calculations Valuations and returns are computed and stated in U.S. dollars, and individual portfolios are revalued monthly. Portfolios also are revalued intra-month in cases where cash flows in excess of 10% of the portfolio's value occur. Pricing information is supplied by the account custodian. The firm uses the Modified Dietz formula to calculate monthly returns and links these returns geometrically to produce an accurate time-weighted rate of return. Composite returns are asset-weighted. Gross of fees returns are calculated gross of management and custodial fees and net of transaction costs. The portion of the Composite gross return that is bundled fee is actually "pure gross" because it is not net of trading costs. Net of fees returns are calculated net of management fees and transaction costs and gross of custodian fees. Prior to 2013, net returns were calculated by deducting the maximum applicable St. James fee, for this strategy, of 1.25% annually, pro-rated on a quarterly basis. For the years 2013 through 2019, net returns are presented net of actual advisory fees. Beginning Jan 2020, net returns are calculated by deducting the maximum applicable St. James fee, for this strategy, of 0.58% annually, pro-rated on a quarterly basis. Both returns are calculated gross of all withholding taxes on foreign dividends. The Core Equity Composite contains portfolios with bundled fees. The bundled fee includes all charges for trading costs, portfolio management, custody, and other administrative fees. Returns in this presentation include reinvestment of all income.

The standard management fee for the Core Equity strategy is 0.75% per annum and is subject to negotiation. Additional information regarding St. James' fees is included in Part 2A of its Form ADV. Internal dispersion is calculated using the asset-weighted standard deviation of all accounts included in the composite for the entire year; it is not presented for periods less than one year, or when there were five or fewer portfolios in the composite for the entire year. The three-year annualized standard deviation measures the variability of the composite and the benchmark returns over the preceding 36-month period. The standard deviation is presented for 2002 through 2010 though it is not required for periods prior to 2011. For the years 1999 and 2000 of this composite, performance can be confirmed by electronic records rather than client custodial statements, which are no longer available for this time period. This presentation does not disclose the effect of material or economic conditions on the results portrayed. Policies for valuing portfolios, calculating performance, and preparing compliant presentations are available upon request.

Past performance does not guarantee future results.
