

ST. JAMES INVESTMENT COMPANY

SELECT VALUE PERFORMANCE OVERVIEW - JUNE 2024

Philosophy

At St. James we employ an absolute return mindset to long-only value investing. We invest in high-quality businesses trading at a discount to our conservative estimate of fair value. Finally, we focus long-term, patiently awaiting optimal conditions prior to deploying trusted client capital.

We contend that the price we pay for an investment determines the return. Further, trying to keep pace with the market in all environments promotes poor decisions. By focusing on the St. James process, positive outcomes emerge over complete market cycles.

ST. JAMES INVESTMENT COMPANY SELECT VALUE GIPS® COMPOSITE REPORT

St. James Investment Company (St. James) claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS standards. St. James has been independently verified for the periods 06/01/1999 – 12/31/2023. The verification report is available upon request. A firm that claims compliance with the GIPS standards must establish policies and procedures for complying with all the applicable requirements of the GIPS standards. Verification provides assurance on whether the firm's policies and procedures related to composite maintenance, as well as the calculation, presentation, and distribution of performance, have been designed in compliance with the GIPS standards and have been implemented on a firm-wide basis. Verification does not ensure the accuracy of any specific performance report.

GIPS® is a registered trademark of CFA Institute. CFA Institute does not endorse or promote this organization, nor does it warrant the accuracy or quality of the content contained herein.

Firm and Composite Information St. James is an independent investment firm that manages equity and balanced portfolios. The firm invests in U.S. and non-U.S. stocks as well as cash or cash equivalents. The Select Value Portfolio seeks long-term capital appreciation in the equities of what we believe to be well-financed, well-managed companies priced below their intrinsic values. The strategy primarily invests in US equities and, when market conditions warrant, St. James will allocate into foreign equities, fixed-income, ETFs, and cash.

The Select Value Composite was created in January 2005 with an inception date of June 1999. A complete list and description of firm composites is available upon request.

Benchmark For benchmark purposes, the Composite is compared to the S&P 500® Total Return Index. The S&P 500® is a widely regarded gauge of large-cap U.S. equities, includes 500 leading companies, and covers approximately 80% of available market capitalization. The volatility of the index may be materially different from that of the Select Value strategy, and the holdings in the strategy may differ significantly from the securities that comprise the S&P 500 Total Return Index. Additionally, the index only includes U.S. companies, while the Composite includes non-U.S. investments. An index is unmanaged, not assessed a management fee, and investors cannot invest directly in an index. The comparison of results to an index does not disclose all facts materially relevant to the comparison. Prior to February 29, 2024, the Russell 1000® Value Index was also used as a benchmark for the Select Value Composite.

Performance Calculations Valuations and returns are computed and stated in U.S. dollars, and individual portfolios are revalued monthly, with pricing data provided by the account custodian. Portfolios also are revalued intra-month when a cash flow in excess of 10% of a portfolio's value occurs. Composite returns are time and asset weighted. Gross-of-fees returns are calculated gross of management and custodial fees, and net of some transaction costs. The Composite includes bundled fee accounts, which are accounts that pay a combined fee that covers adviser management fees, custody fees, trading costs and other administrative fees. The St. James management fee for these accounts is not bundled. Since 2010, Bundled Accounts have accounted for between 1.6% and 15.6% of total accounts included in the Composite, although this range fluctuates. Other accounts included in the Composite are not charged a bundled fee. These accounts pay management and custodial fees separately, and trading costs are netted out of the gross return for these accounts. The gross returns for the bundled fee accounts are "pure gross" returns and are higher than accounts that do not have bundled fees, because they do not include any trading costs. Consequently, because the bundled fee accounts make up more than 10.0% of the Composite, the Composite's gross performance may be higher because all trading costs are not included in the gross-of-fees return. Net-of-fees returns are calculated net of management fees and transaction costs and gross of custodian fees. From inception through 2017, net returns were calculated by deducting the maximum applicable St. James management fee, for this strategy, of 1.25% annually, pro-rated on a quarterly basis. For 2018, the maximum applicable St. James fee of 1.00% was used and, from 2019 – present, the maximum applicable St. James management fee of 0.75% was used. Investors should understand that St. James provides its services directly to some clients, and indirectly, as sub-adviser, to other clients. When St. James provides its services directly, clients are charged a management fee as set forth in the Investment Management Agreement between the client and St. James. In a sub-advisory relationship, St. James provides advisory services to clients of another investment adviser for a fee, and that adviser charges an additional advisory fee. Therefore, when St. James acts as sub-adviser, the underlying client pays a greater overall advisory fee. St. James sub-advisory clients should understand that an additional advisory fee is charged by the adviser directly responsible for their account, and this fee has the effect of decreasing performance returns. Both the gross and net returns do not reflect the deduction of withholding taxes on foreign dividends. Returns in this presentation include reinvestment of all income.

Additional Information The highest management fee charged by St. James is 0.75%, annually, and is subject to negotiation. When St. James serves as sub-adviser on an account the highest fee charged by the Firm is 0.50%, annually. Additional information regarding St. James' fees is included in Part 2A of the Form ADV. Internal dispersion is calculated using the asset-weighted standard deviation of all portfolios included in the Composite for the entire year. Dispersion is not presented for periods less than one year or when there were five or fewer portfolios in the Composite for the entire year. The three-year annualized standard deviation measures the variability of the Composite and benchmark returns over the preceding 36-month period. Internal dispersion and standard deviation are calculated using gross-of-fees returns. For the years 1999 and 2000 of this Composite performance can be confirmed by electronic records rather than client custodial statements, which are no longer available for this time period. Due to an error, the number of portfolios, for 2006, changed from 32 to 27, and the number of portfolios, for 2007, changed from 42 to 33. An error on the April 2023 Report, showed the 2002 net of fees return as 61.6%. This has been corrected to -0.4%. Additional information regarding these errors is available upon request. This presentation does not disclose the effect of material or economic conditions on the results portrayed. Total Strategy Assets include Composite assets and strategy advisory-only assets for which St. James provides investment recommendations to another firm for portfolios managed to the Composite strategy but has no control over the implementation of investment decisions or trading authority for the assets. Strategy advisory-only assets are presented as supplemental information. A portion of the value of these assets is reported as of the previous month-end. The amount is immaterial to the value of the Composite. The Total Firm and Advisory Asset Only column reflects discretionary and non-discretionary assets for all strategies within the Firm, in addition to advisory-only assets for the Select Value Composite. Policies for valuing investments, calculating performance, and preparing GIPS Reports are available upon request.
